Highlights

Super VDSL

The VC420-G3v features Super VDSL (VDSL2 Profile 35b), the latest generation of DSL technology. Downstream is increased by up to 350Mbps, 3.5x faster than its VDSL2 predecessor. G.Vector reduces interference on your DSL line for a more stable data transmission.

Beamforming for Better Corverage

Beamforming technology dramatically improves the router's coverage by locating wireless devices to form stronger, more reliable connections, even as mobile devices move from room to room.

Highlights

MU-MIMO: Efficient Wi-Fi for Every Device

MU-MIMO technology serves up to four devices at once, reducing wait time, increasing Wi-Fi throughput for every device, and making each stream more efficient.

Airtime Fairness for More Efficient Wi-Fi Distribution

With Airtime Fairness, the VC420-G3v equally divides attention between newer and older devices improving overall Wi-Fi performance and reliability without letting older devices limit your network.

Features

Speed

- Ultimate Wireless Speed – Combined wireless speeds of up to 300 Mbps (over 2.4GHz) and 1733 Mbps (over 5GHz)
- 256QAM Technology – Uses 256QAM modulation scheme for higher data throughput, boosting wireless speeds by up to 33%
- MU-MIMO Technology – Simultaneously exchange data with several devices, achieving speeds which are 4x faster than standard AC routers
- 802.11 ac – Provides a data transfer rate 3 times faster than 802.11n for each stream

Wi-Fi Range

- Optimal Range Wi-Fi – High-performance antennas ensure widespread Wi-Fi coverage and a stable connection
- Wi-Fi with Beamforming - Beamforming technology locates the connected devices and further improves the VC420-G3v's range and the signal strength to each mobile device, delivering a more reliable and efficient wireless connection

Reliability

- Simultaneous Dual Band – Separate Wi-Fi bands enable more devices to connect to your network without a drop in performance
- Bandwidth Management – Bandwidth Control makes it easier for you to manage the bandwidth of connected devices
- Airtime Fairness – Balances bandwidth to improve overall throughput
