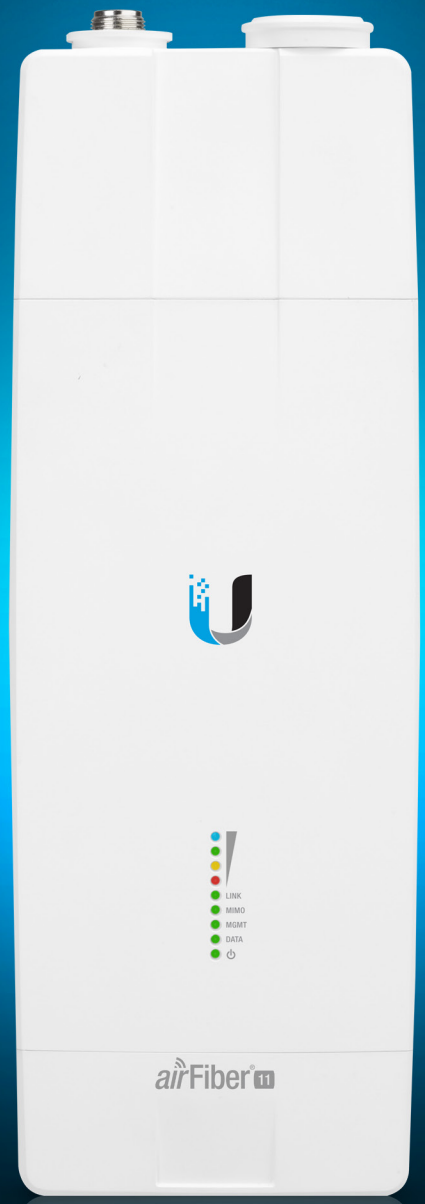
DATASHEET



airFiber® 11

Licensed Backhaul Radio

Model: AF-11

Full-Duplex, Point-to-Point Radio

11 GHz Frequency Operation

Up to 1.2+ Gbps Throughput

Overview

Ubiquiti continues to disrupt the wireless broadband market with revolutionary technology at breakthrough pricing, by introducing the airFiber® AF-11, a radio purpose-built for outdoor PtP bridging and carrier-class network backhauls using the licensed 11 GHz radio band.

The AF-11 breaks free from the congested 5 GHz band to help meet the growing need for broadband capacity.

For maximum flexibility, the airFiber AF-11 works with the Ubiquiti® AF-11G35 antenna, or with most third-party antennas using an optional adapter kit (not included).

AF-11 Radio Mounted on AF-11G35 Antenna

Groundbreaking Design

The AF-11 gives exceptional performance compared to other 11 GHz radios in its price range. Unlike other products that use adaptations of Wi-Fi-based designs, the AF-11 is specially engineered for the 11 GHz band, with a custom modem and radio design optimized for the efficient transport of data.

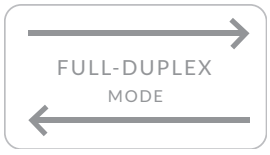
Product Advantages

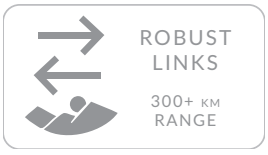
True Full-Duplex Design
The AF-11 offers a true FDD solution that fully satisfies all licensing requirements for the 11 GHz band.

Ultra-Low Latency
Overall customer experience and system capacity are enhanced with FDD performance.

Enhanced Robustness
The AF-11 uses managed licensed frequencies to create a robust, interference-free link that provides the maximum possible throughput.

Extended Range The RF power amplifiers feature a unique bias scheme, allowing high-order constellations at longer ranges.





Channel Configuration

Optimized Channels

The airFiber AF-11 can use single (SISO) or bonded (MIMO)* channels, depending on your specific licensing requirements. The AF-11 also features different channel width sizes to suit your deployment needs, and you can independently configure TX and RX channel frequencies.

Reconfigurable Duplexers

The AF-11 features a unique modular duplexer design to suit multiple frequency configurations.

Each AF-11 radio can be configured to support any allowable frequency by simply changing the duplexers (sold separately) for high-band or low-band use in the 10.7 - 11.7 GHz allocation.

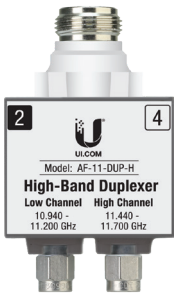
Each duplexer has a low channel and a high channel that can be configured by simply reversing the position of the duplexer.

Highest Performance Value

The compact AF-11 supports high-order constellations – up to 1024QAM – allowing it to deliver the greatest spectral efficiency in its class.

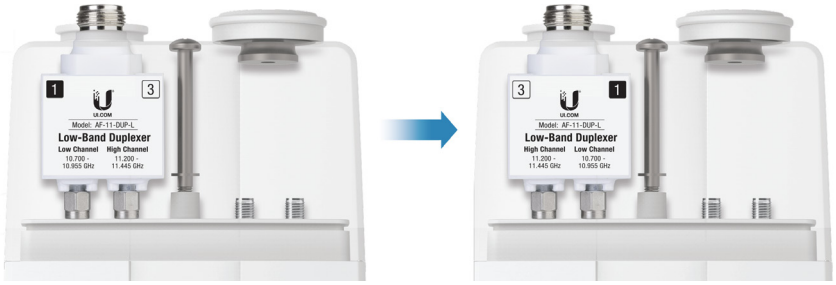
* SISO mode configuration requires either one low-band duplexer or one high-band duplexer. MIMO mode configuration requires a second low-band or high-band duplexer. Duplexers are sold separately.

Low-Band Duplexer



High-Band Duplexer

Duplexer	Low Channel	High Channel	Model
Low-Band Duplexer	10.700 - 10.955 GHz	11.200 - 11.445 GHz	AF-11-DUP-L
High-Band Duplexer	10.940 - 11.200 GHz	11.440 - 11.700 GHz	AF-11-DUP-H



Reversible Duplexers For Easy Channel Configuration

Advanced Engineering

Ubiquiti's INVICTUS™ 2 custom silicon and proprietary radio architecture are designed specifically for long-distance, outdoor wireless applications, providing superior performance, long-range capability, and higher delivered throughput.

Deployment Flexibility

The airFiber AF-11 provides a number of deployment options including:

Power Source Options

Support for PoE or DC power gives you the flexibility to power the AF-11 separately from Ethernet traffic.

- PoE power can be supplied on the DATA port, using the provided PoE adapter.
- DC power can be supplied using the terminal block.

Versatile, Ruggedized N-Type Connectors

N-connectors allow the AF-11 to be used with either the Ubiquiti AF-11G35 antenna or a variety of commonly available antennas.

Specially designed silicone boots provide a weatherproof barrier against dust and moisture.

N-Connector with Boot In Place

airFiber X Antenna

Ubiquiti offers the AF-11G35 antenna, specially designed for the AF-11 radio, so that installation requires no special tools. The AF-11G35 comes preconfigured with V/H polarization, and can be configured to support ± 45° slant polarization for improved noise immunity and Signal-to-Noise Ratio (SNR), dependent on regulatory region.

AF-11G35 Antenna

Model	Frequency	Gain	Radome
AF-11G35	11 GHz	35 dBi	Integrated

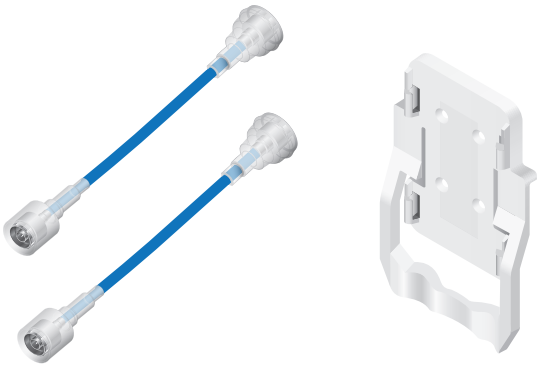
The AF-11G35 offers up to 35 dBi of gain.

Front View of AF-11G35 with Radome

Back View of AF-11G35 with AF-11 Radio

Adapter Kit

For even greater flexibility, Ubiquiti also offers the optional AF11-CA adapter kit which allows the AF-11 to work with most of the commonly available 11 GHz antennas. The kit includes two RF cables plus a bracket that provides a secure mount for the AF-11 on the back of the antenna.



AF11-CA Adapter Kit

Specifications

AF-11	
Dimensions	327 x 112 x 86 mm (12.87 x 4.41 x 3.39")
Weight	2.260 kg (5 lb)
RF Connectors	(4) SMA Weatherproof: TX 0, RX 0 (Chain 0) and TX 1, RX 1 (Chain 1) (2) N-Type Waterproof, One per Duplexer
Power Supply	50VDC, 1.2A PoE Gigabit Adapter (Included)
Power Method	Passive Power over Ethernet Pins 1, 2, 4, 5 (+) and Pins 7, 8, 3, 6 (-) or DC Power Block
Max. Power Consumption	36W
Supported Voltage Range	38-56VDC
Automatic Transmit Power Control (ATPC)	Yes
Mounting	Integrated Pole Mount Included Oversized Rocket Mount Compatible
LEDs	(8) Status LEDs: Data Port Link/Activity Management Port Link/Activity MIMO Mode RF Link (4) Autoscaling Signal Strength Bar Graph
Operating Temperature	-40 to 55° C (-40 to 131° F)
Certifications	CE, FCC, IC

AF-11 Networking Interface	
Data Port	(1) 10/100/1000 Ethernet Port
Management Port	(1) 10/100 Ethernet Port

AF-11 System	
Processor	INVICTUS 2 IC
Maximum Throughput	1.2+ Gbps[1]
Maximum Range	300+ km[1]
Encryption	128-bit AES
OS	airOS® F
Wireless Modes	SISO/MIMO
Latency Full Duplex Mode	< 200 µs at Full Throughput
MTU (Maximum Transmission Unit)	Up to 9600

[1] Throughput and range values may vary depending on the environmental conditions.

AF-11 Radio	
Frequency Range	10.7-11.7 GHz[2]
Max. Conducted TX Power	30 dBm[2] (Dependent on Regulatory Region)
Frequency Accuracy	± 2.0 ppm
Channel Bandwidth	3.5/5/7/10/14/20/28/30/40/50/56 MHz Selectable[3]

AF-11 Suggested Max. TX Power	
10x (1024QAM)	18 dBm
8x (256QAM)	21 dBm
6x (64QAM)	24 dBm
4x (16QAM)	30 dBm
2x (4QAM)	30 dBm
1x (QPSK)	30 dBm

AF-11 Duplexer	
Low-Band Duplexer	Low Channel: 10.700 to 10.955 GHz High Channel : 11.200 to 11.445 GHz
High-Band Duplexer	Low Channel : 10.940 to 11.200 GHz High Channel : 11.440 to 11.700 GHz

[2] For region-specific details, refer to the *Compliance* chapter of the airFiber AF-11FX User Guide at ui.com/download/airfiber

[3] Channel widths may vary according to country/region regulations.
